

Redefining precious metals for industry

YARD·O·LED

SINCE 1822

Luxury Silver Penmaking Case Study

Supporting British Craftsmanship with Precision Silver Components

Yard O Led is a historic British maker of handcrafted sterling-silver pens, known for its iconic hammered and stamped designs. Every pen is individually made in Birmingham using traditional silversmithing techniques.

Cookson Industrial supports this craftsmanship by supplying precision-manufactured sterling silver tube and sheet, enabling Yard O Led's artisans to shape, form and finish each pen by hand.

Precision Silver Tube for Pen Bodies

We supply Yard O Led with 1-metre sterling silver tubes produced to exact diameter and wall-thickness requirements. These tubes are:

- cut to length
- hand-formed and engraved
- crafted into pen barrels and lids

All tube offcuts are returned to us for recycling, closing the loop and ensuring nothing goes to waste.

Cookson Industrial supplies gold, silver, platinum and other precious metals in standard and bespoke forms for premium, high-precision and luxury components.

We supply the precious metal —
Yard O Led brings the artistry.
Their hand-crafting, engraving
and finishing skills transform
semi-finished silver into:

Luxury Writing Instruments

Silver Sheet for Stamped Patterns and Components

We also provide sterling silver sheet, used to:

- stamp Yard O Led's signature decorative patterns
- form key body components
- create pen clips from leftover stamped sections

This efficient use of material reinforces their blend of craftsmanship and sustainable production.
